

The challenge

While cash remains king in our country, this is especially true in schools where payment options for students are limited. This reliance on cash brings challenges such as theft, misplacement, and misuse of funds by some staff members.

The solution

Our Xzeus (*pronounced as zeus*) accounts addresses these pain points, ensuring a secure and transparent solution for parents, students, and the school's reputation.

How it works

Beyond our mission to empower everyone financially, we've eliminated the need for cards or devices. Instead, we use the most natural form of payment: fingerprints.

Our simple three-step process is as follows:

1. **Create Account:** Students begin by creating a Xzeus account at the administration block using just their name. This generates a unique identifier known as the **Xzerra Code**.
2. **Register Fingerprint:** With their code in hand, students register their fingerprint using a device provided by the school administration.
3. **Send Money:** Finally, students can send a Top-Up Request to their parent, guardian, or friend, who will receive it through the app. Once the funds are sent, students can start making payments effortlessly with just their fingerprint.

Feature plans

The Xzeus accounts will enter beta in *early 2025* with select partners, primarily tested in school environments for maximum impact. After the beta phase, we'll expand access to more partners for broader testing.

What does this mean for the future of payments

Our Xzeus accounts are inclusive and easy to use—anyone can create an account with just their name, no tech barriers required. Our technology handles everything else, and this is only the beginning of our journey.
